Aims and Scope: *Numerical Heat Transfer, Part A: Applications* is an international vehicle for the publication of numerically based, results-oriented papers dealing with problems in heat transfer, mass transfer and fluid flow. The underlying numerical solutions may be based either on available methodology or on adaptations of moderate extensions of available methods. The presentation of experimental results which support the numerical solutions is also acceptable. However, papers whose main focus is on innovative numerical methodology development should be submitted to a companion journal, *Numerical Heat Transfer Part B: Fundamentals*.

This journal will be published in two volumes, each containing six issues, for a total of twelve issues scheduled for publication in 1995.

Abstracted and/or Indexed in: Chemical Abstracts, Current Contents, Engineering Information Inc., Information Service in Mechanical Engineering (ISMEC), Materials Science Citation Index™, Nova Information Services Co., and Science Citation Index.
